

# Transforming waste into sustainable biofertilisers

**HORECA waste**

Spain

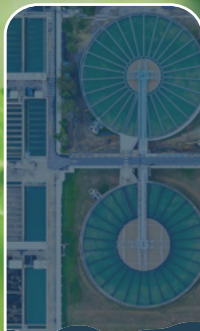

**Animal waste**

France

**Olive oil waste**

Greece

**Multi-waste**

Italy

**Dairy waste**

Poland

LANDFEED is advancing sustainable agriculture by converting waste from agro-food, forestry, and urban sources into bio-based fertilisers by developing advanced nutrient recovery technologies and bio-based fertiliser coatings that optimise nutrient release. Through innovative nutrient release mechanisms and local use cases, LANDFEED aims to reduce greenhouse gas emissions, protect water resources, and restore soil health, aligning with the EU's vision for a resilient and eco-friendly agricultural future.
